

TRAINING COURSES

Legionella and water chemistry are considered specialty fields and one typically needs to spend years in training to understand all the aspects. Industry today does not have the time or resources to train their staff and have to rely on service providers to fill this role.

WWINC intend to bridge the gap between the Service Provider experts and the Supervisors/Managers on site that deal with water related matter by offering short courses that will enable site managers and owners to identify problems quickly - enabling them to be rectified in order to ensure efficient operation with optimal water and energy usage.

Legionella awareness training – 1 hr

As part of SANS 893 and your Water Management Plan, your staff needs to have been given *Legionella* awareness training. This short course represents an overview of what *Legionella* is and where it is found and tips to combat them at home and at work.

The following 1 day courses are offered with emphasis on each aspect's relationship to *Legionella* control:

Fundamentals of water

- Types of cooling
- Chemical properties of water
- Cooling problems
- *Legionella*

Cooling systems – a practical review

- Visual troubleshooting
- Chemical analysis trend troubleshooting
- Water and Energy Saving areas
- *Legionella* control
- Includes checklists

Legionella risk management – in terms of OHS act and SANS 893

- OHS act requirements
- SANS 893 1 & 2 requirements
- Includes management control checklists

Tailored courses – combining OHS Act, SANS 893 with emphasis on the systems at your customer sites

- Legionella overview
- OHS act requirements
- SANS 893 1 & 2 requirements
- Emphasis on site specific systems
- Includes management control checklists
